

QUALITY OF LTBI CARE: LTBI CASCADE OF CARE

JONATHON CAMPBELL, ON BEHALF OF HANNAH ALSDURF + DICK MENZIES
McGILL INTERNATIONAL TB CENTRE

IMPORTANCE OF LATENT TB

Global estimates –
25% of world
population have
latent TB infection

```
graph LR; A[Global estimates – 25% of world population have latent TB infection] --> B[Of these, about 10% will develop active TB]; B --> C[Meaning 1.7 billion infected and from these, 170 million will develop TB];
```

Of these, about
10% will develop
active TB

Meaning 1.7 billion
infected and from
these, 170 million
will develop TB

IMPACT OF VARIOUS STRATEGIES ON TB TRENDS OVER NEXT 35 YEARS

(DYE, ET AL., ANN REV PUBL HEALTH 2013)

ASSESSING GAPS IN THE LTBI CASCADE OF CARE

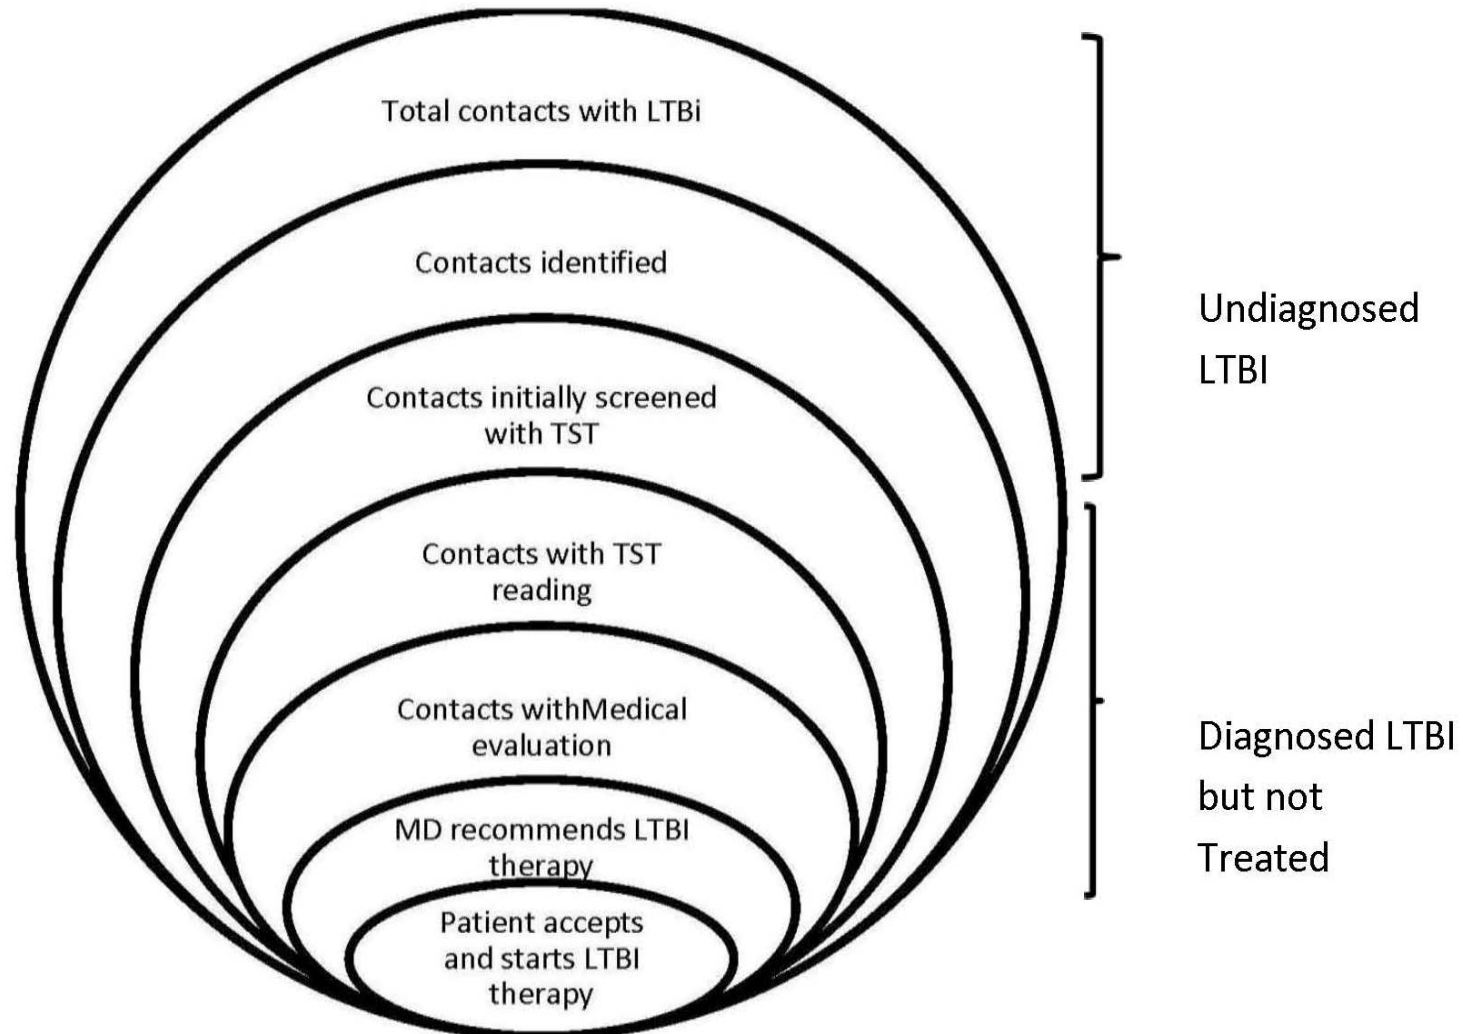

What I often hear when I hear people talk about improving LTBI care...

50-60% of people complete LTBI treatment!

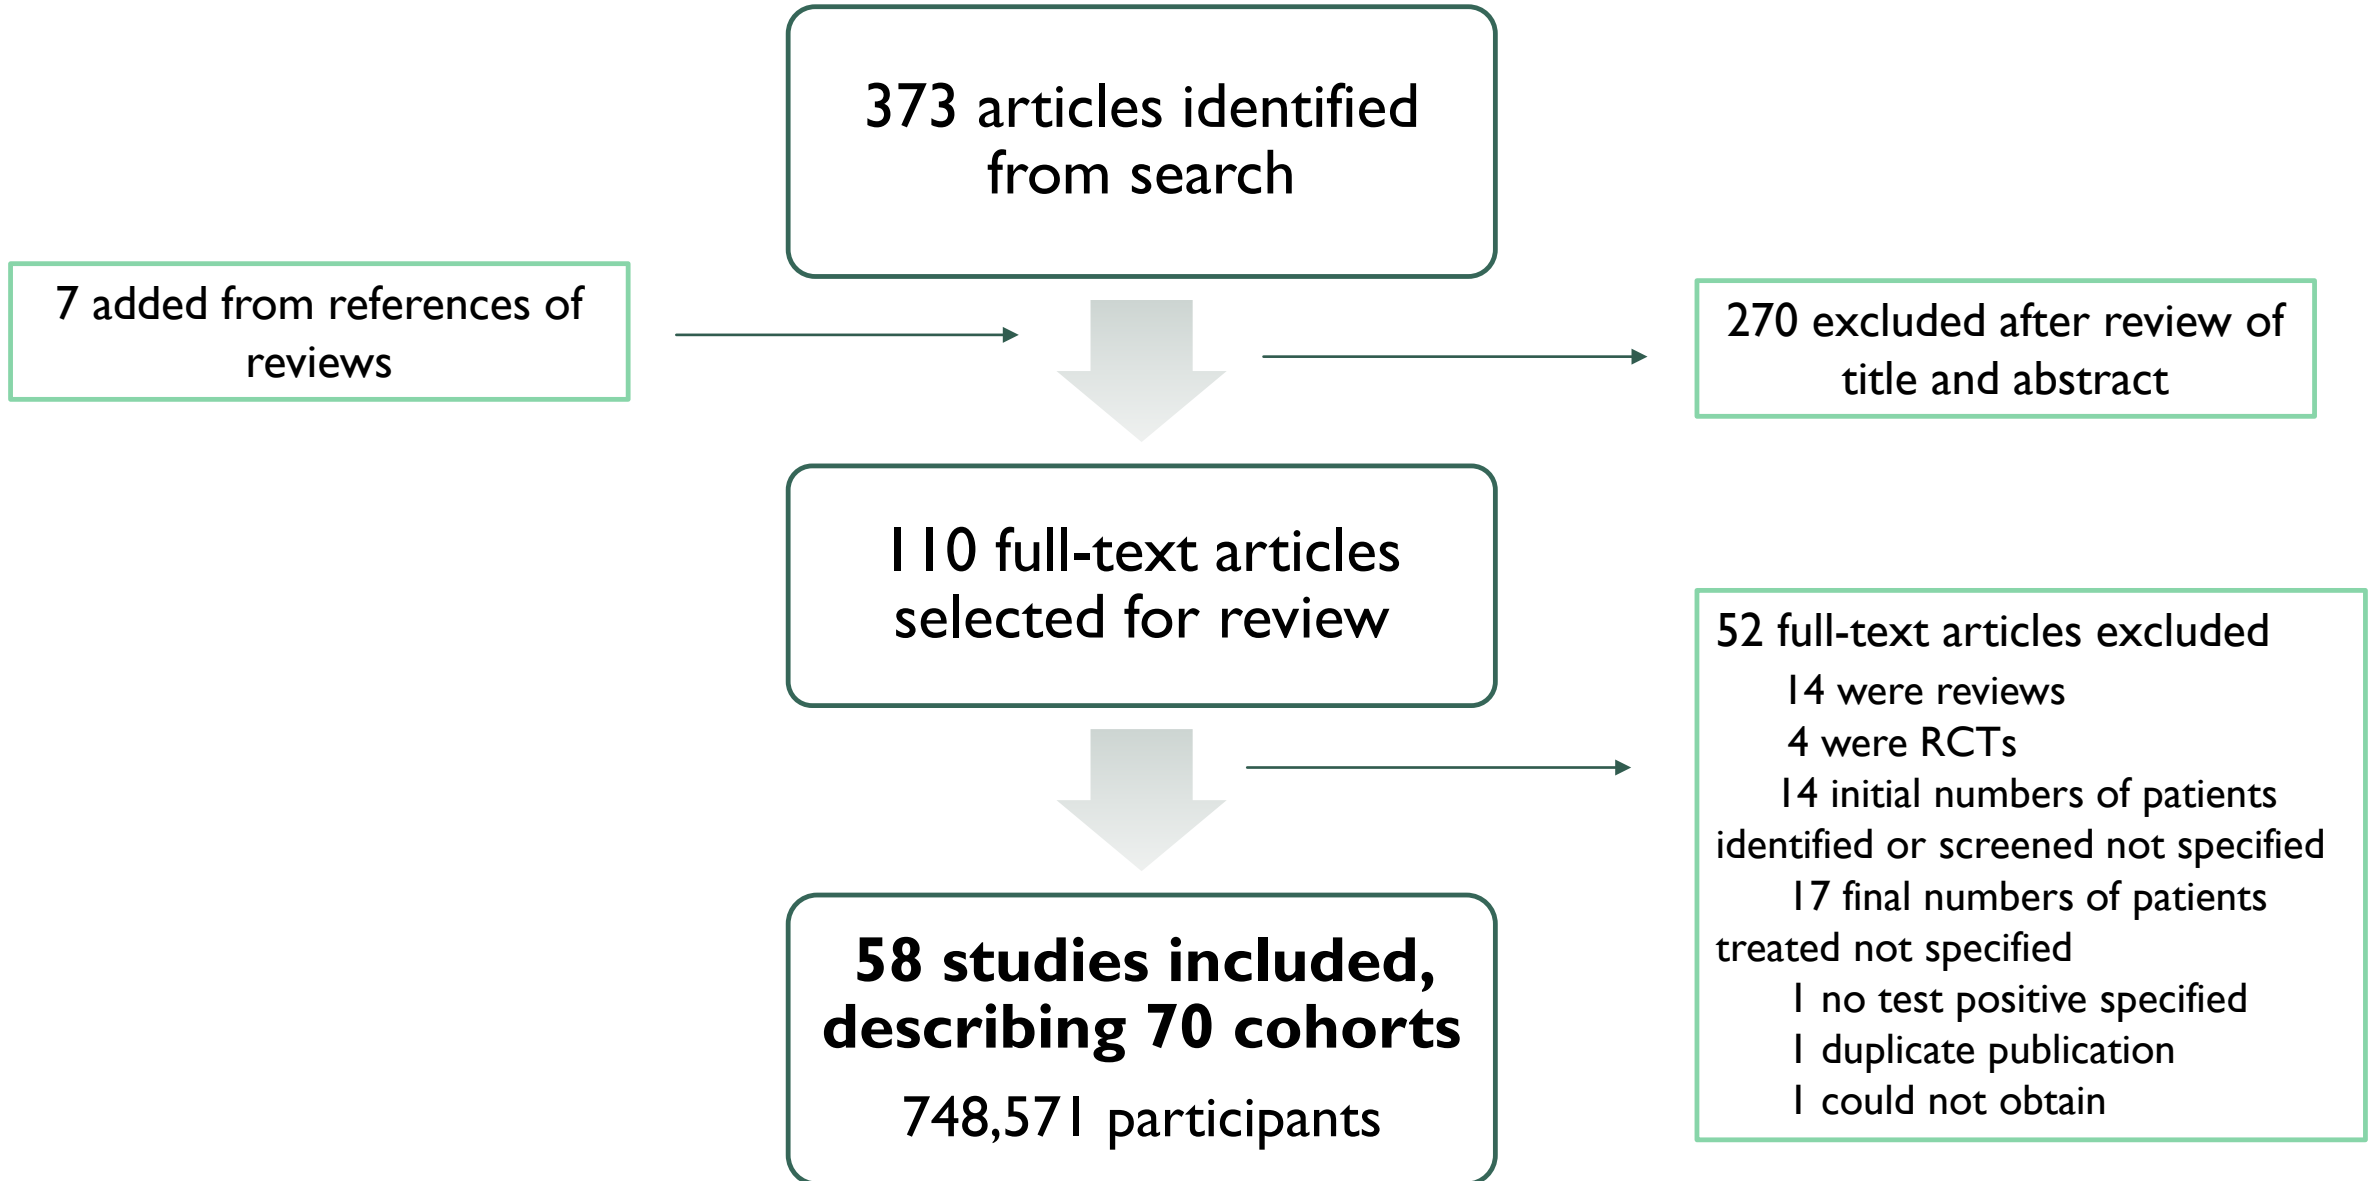

We need more people to complete treatment!!

Shorter regimens will solve our problems!!!

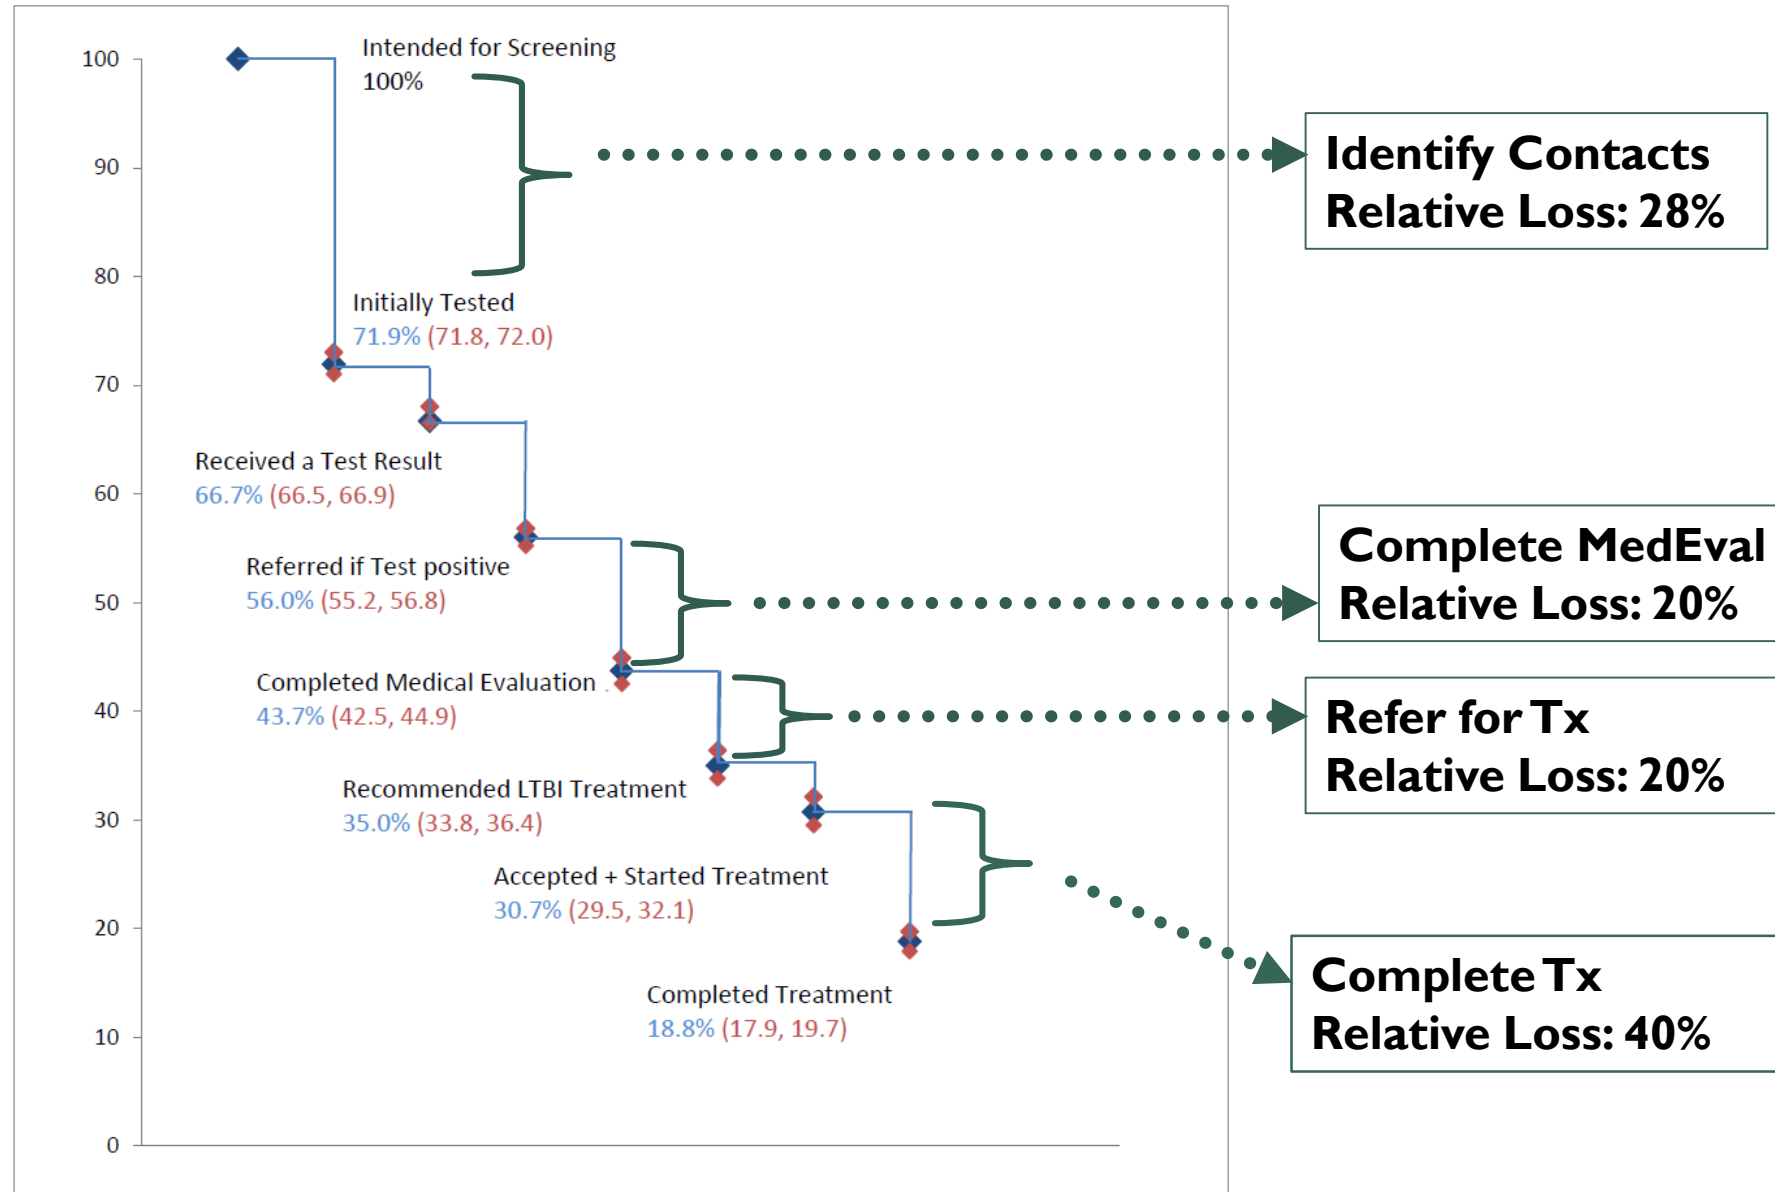

Cascade of care in LTBI management: TB contacts

CASCADE OF CARE IN LTBI – SYSTEMATIC REVIEW

KEY LOSSES ALONG THE LTBI CASCADE OF CARE

KEY LOSSES ALONG THE LTBI CASCADE OF CARE

So relative losses highest in completing Tx – BUT 70% of patients don't even start!!

Less than **20%** of eligible contacts completed preventive therapy

28.1 lost at initial step of identification and screening

12.3 did not complete medical evaluation (of TST+)

8.7 were not recommended LTBI treatment

11.9 did not complete LTBI treatment (of those who started treatment)

BARRIERS ASSOCIATED WITH LOSSES - EXAMPLES

- **Step 2 - Not completing screening and testing**
 - Social situations impeding completion of screening (i.e. language/cultural barriers, feels too ill)
 - Health-systems issues (i.e. hard to access clinic, long wait times, difficulties with insurance)
- **Step 4 – Not being referred or recommended for treatment**
 - Considered too old (older than 35 years)
 - Low healthcare worker (HCW) knowledge about need for preventive therapy
 - Social situations impeding treatment (i.e. substance abuse, fear of deportation or immigration status, recent release from jail/prison, no transportation)

SR/MA CONCLUSIONS

- Losses and drop-outs occur at every stage of care - initial identification to completion of therapy
- 70% of all person who could benefit – never even start. They will derive no benefit from better / shorter treatment!
- Latent TB care is a complex process!! A Cascade of care analysis can be helpful to pinpoint where the problems are occurring, and solutions needed
- Research is needed to determine factors associated with these losses
- But TB programs need to plan strategies to improve access to resources required for LTBI dx/tx, particularly among close household contacts of confirmed, pulmonary TB

EVALUATING AND (HOPEFULLY) FIXING THE LTBI CASCADE

ACT4 TRIAL

ACT4: Pragmatic, cluster randomized trial (2015-2019)

- **5 countries:** Benin, Canada, Ghana, Indonesia, Vietnam
- **Clusters:** 24 health facilities

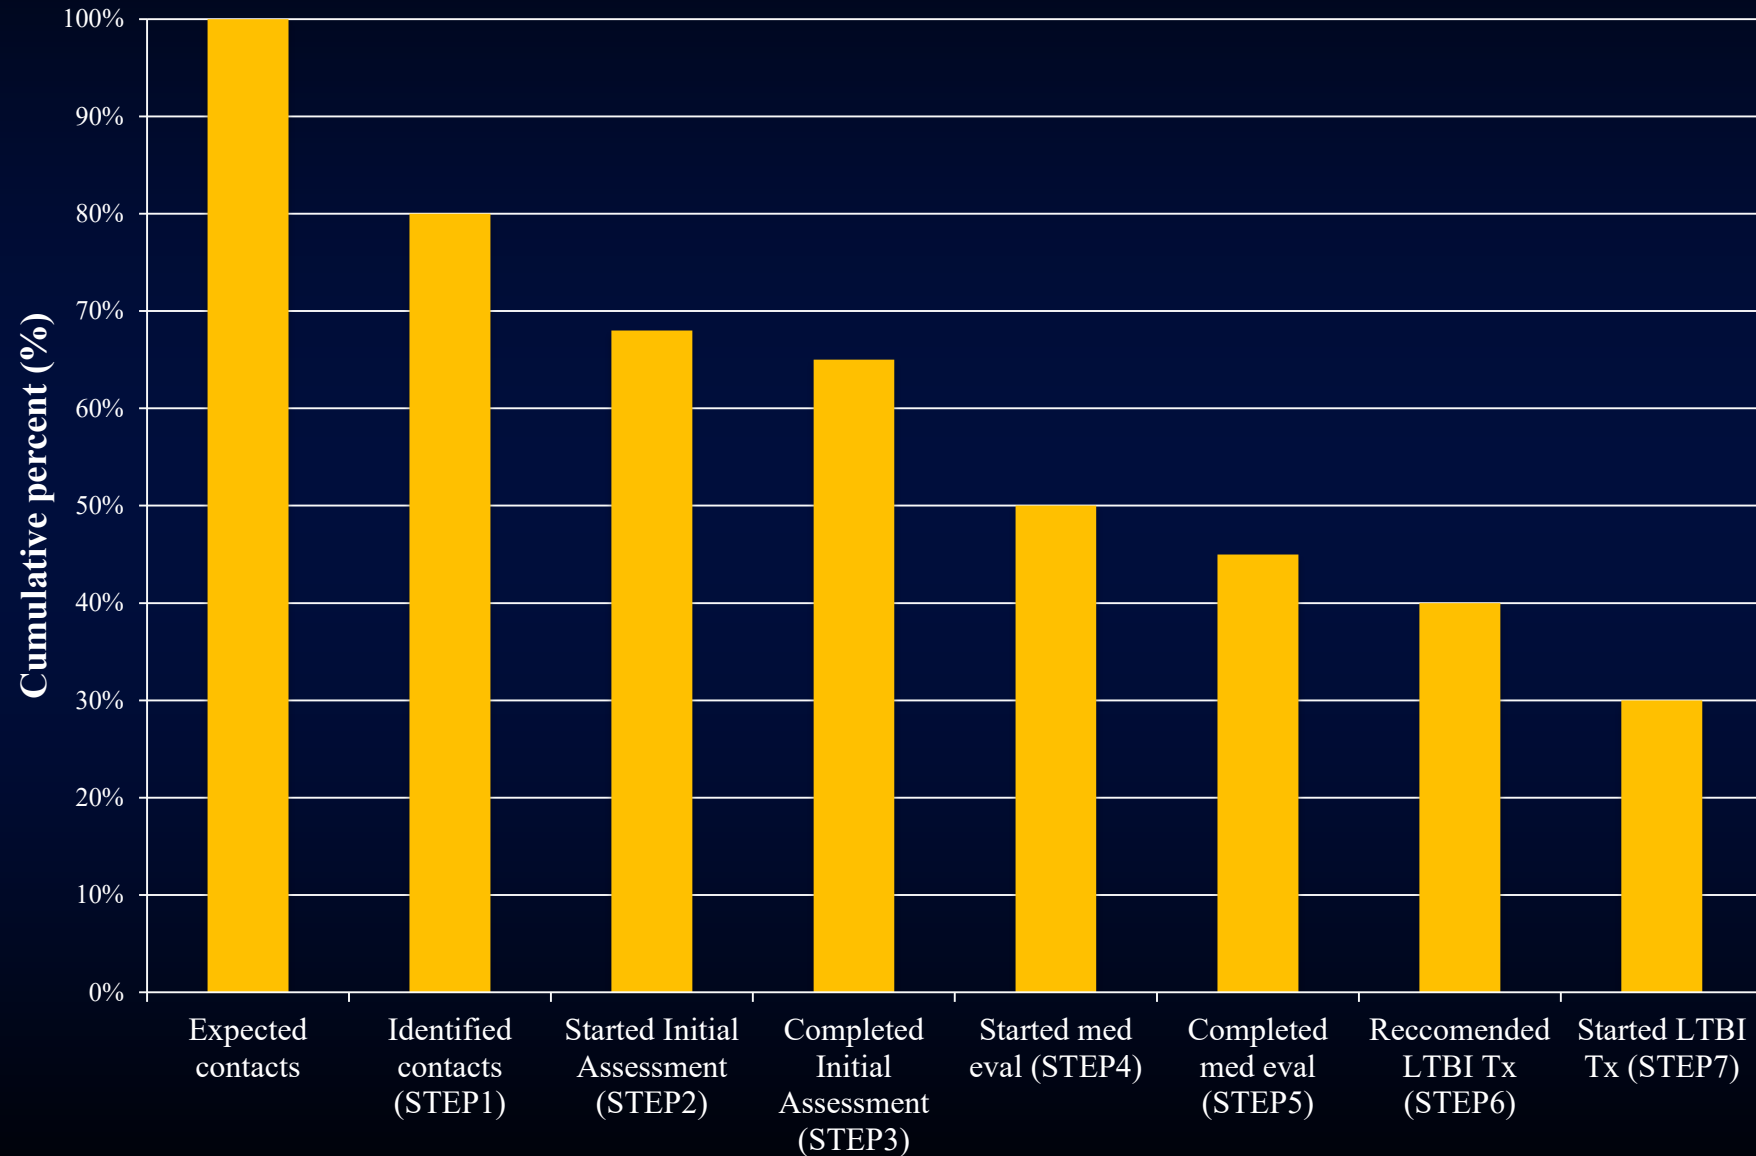

Objective: To evaluate a process to strengthen the latent TB Cascade of Care

- Standard evaluation – Cascade analysis. Questionnaires to patients, contacts & HCWs
- Locally-selected solutions to address losses along the LTBI Cascade of Care
- Clinical in-service trainings were conducted with HCW at each site on a regular basis
- mTST: a mobile health approach for quality improvement and training of TST

Using a simple tool to assess the Cascade of Care in Latent TB

Cumulative proportion completing each cascade step

Percent of contacts completing each cascade step, as a percent of number completing previous step

Percent of the total lost that is attributed to each step of the cascade

Identifying and selecting solutions

- **Impact of potential Solutions** (*IJTLD... under revision*):
 - Scoping review of literature to identify potential “solutions”
 - What has been tried – In Latent TB, Active TB (or other diseases if nothing found)
 - Identified their impact – by step in Cascade.
 - **i.e. How much improvement** might be expected
- **Meetings:** with local TB programs, and the clinics
 - Review options for solutions, & evidence base for each
 - Select solutions: consider cost, feasibility, sustainability and potential impact (with help of modelling tool)
 - Approved by TB program, but finalized by clinic staff

ACT4: Cluster randomized RCT

Site-specific Solutions – examples

To enhance initiation of LTBI therapy (Step 6-7):

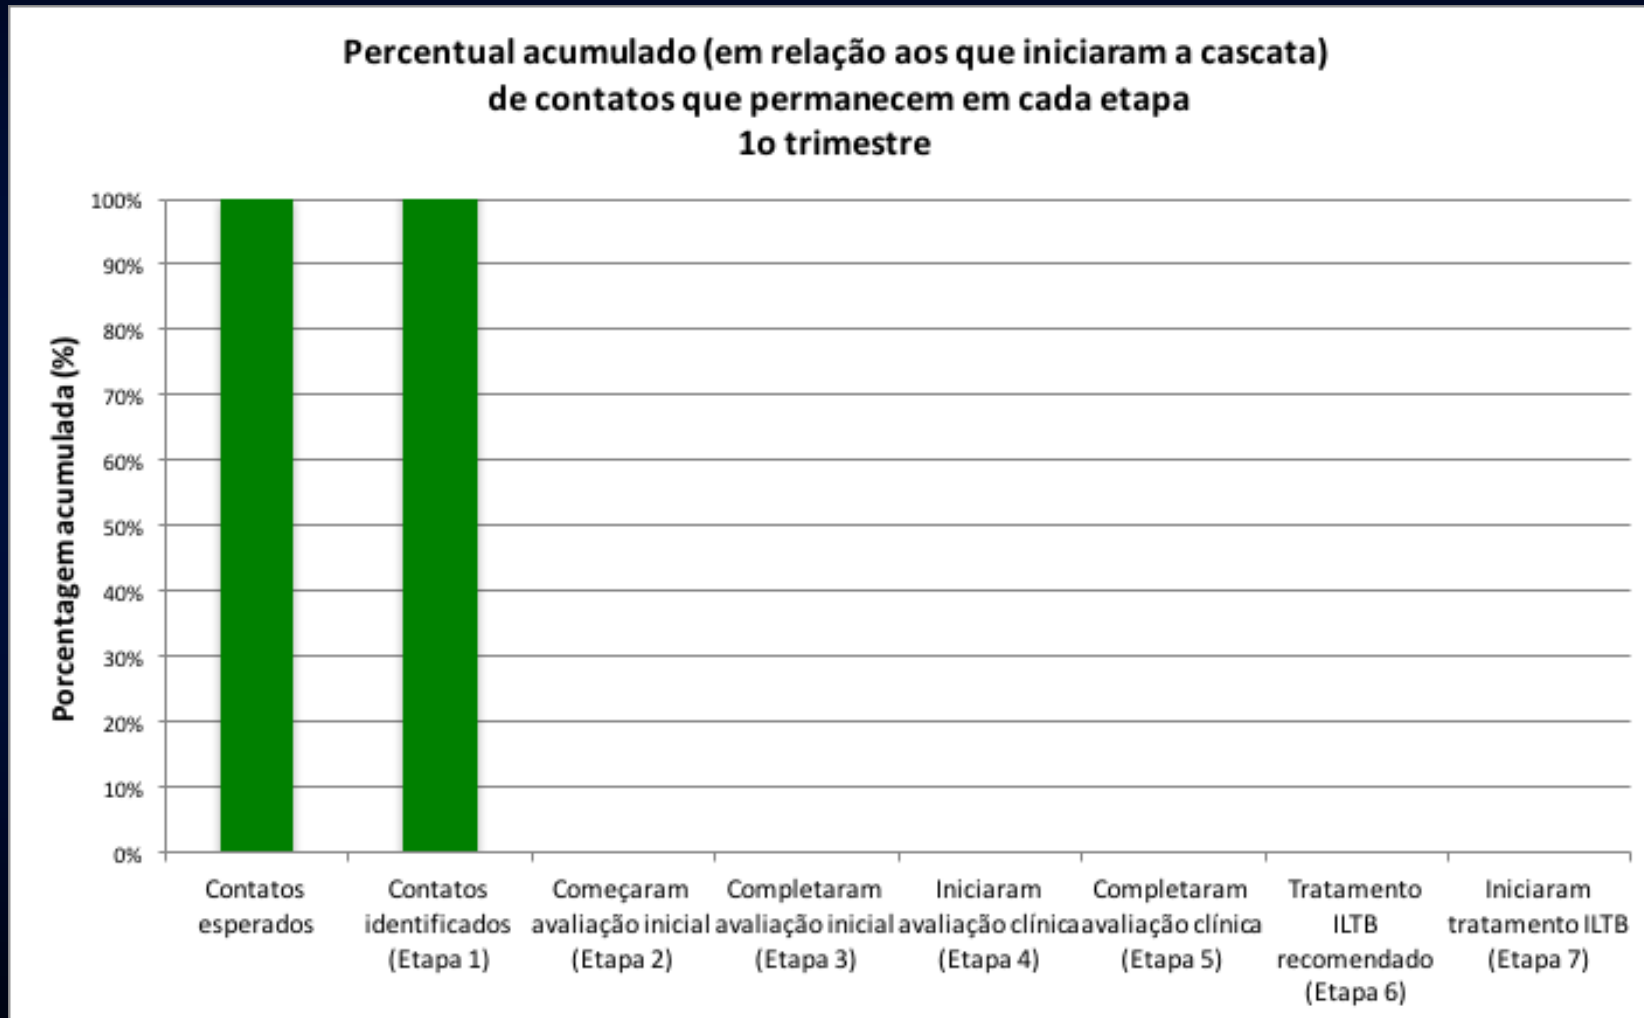

- **Provider education-** regarding LTBI therapy. Prepare key messages. Study staff educate MDs and nurses (Brazil)
- **Evening clinics-** (for non-unionized new immigrants) (Calgary)
- **Payments to health workers-** for patients starting, and completing therapy. (Vietnam)
- **Incentives-** to patients who pick up prescriptions (Vancouver)

Brazil Cascade Experience (The Pilot Site)

- Bottlenecks appear in sequence as problems in the earlier steps were solved...

1st Trimester results

Problem Identified: no PPD and no TST training

Contacts Identified Start Initial Assessment Finish Initial Assessment Start Med Eval Finish Med Eval Recommend Tx Initiate Tx

2nd Trimester results

Problem identified: Chest X-rays not available

Contacts Identified Start Initial Assessment Finish Initial Assessment Start Med Eval Finish Med Eval Recommend Tx Initiate Tx

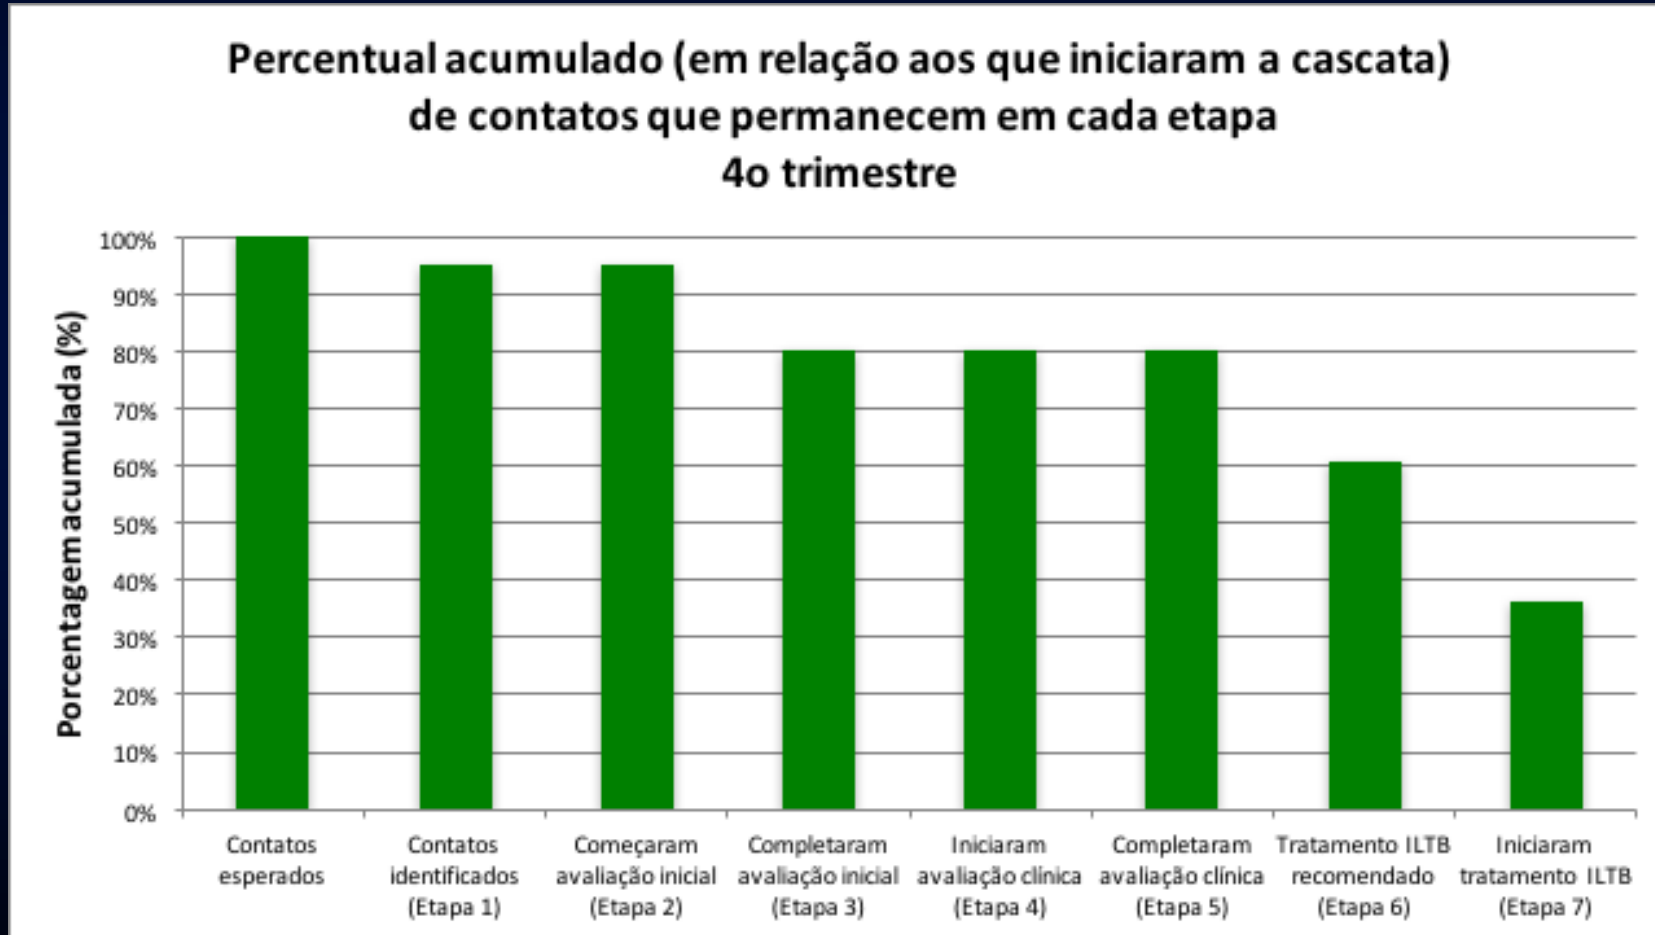

3rd Trimester results

Problem discovered: MDs did not prescribe INH treatment

Contacts Identified Start Initial Assessment Finish Initial Assessment Start Med Eval Finish Med Eval Recommend Tx Initiate Tx

4th Trimester Results: All problems identified and resolved (at least partially)

Contacts Identified Start Initial Assessment Finish Initial Assessment Start Med Eval Finish Med Eval Recommend Tx Initiate Tx

MOBILE TST (mTST) – TRAINING TOOL

- Tuberculin Skin test (TST) is a relatively **simple test**, but requires careful training, as well as ongoing supervision.
- During ACT4 site visits in the fall 2017, our team found there were **important errors** in methods of TST administration.
- **Objectives:** 1) To establish the **best technical method** to capture a photo of TST injection and reading, and 2) to **estimate the accuracy** for the measurement of TST injection and reading - using photos taken with smartphone (mTST)
- **Results:** Tool was validated and resource is available online to help train HCW
 - <https://www.youtube.com/watch?v=S8gLaIPqvho>

The bleb is measured immediately following TST administration by TB nurse

Photos are taken using the protocol and transmitted by email

The independent reviewers, measure the bleb using software (i.e. Microsoft Paint). Reviewers do not know onsite measurement (blinded)

The measurements are dichotomized
“Injection is correct or incorrect”

The mTST – a tool for quality control for TST administration

Photos are taken and transmitted by email

TB nurse measures the induration using Ballpoint Pen Method. Reading in mm is transmitted to coordinator

The reviewers, read and answer the question "Is there induration present" Yes or No. Reviewers do not know onsite measurement (blinded)

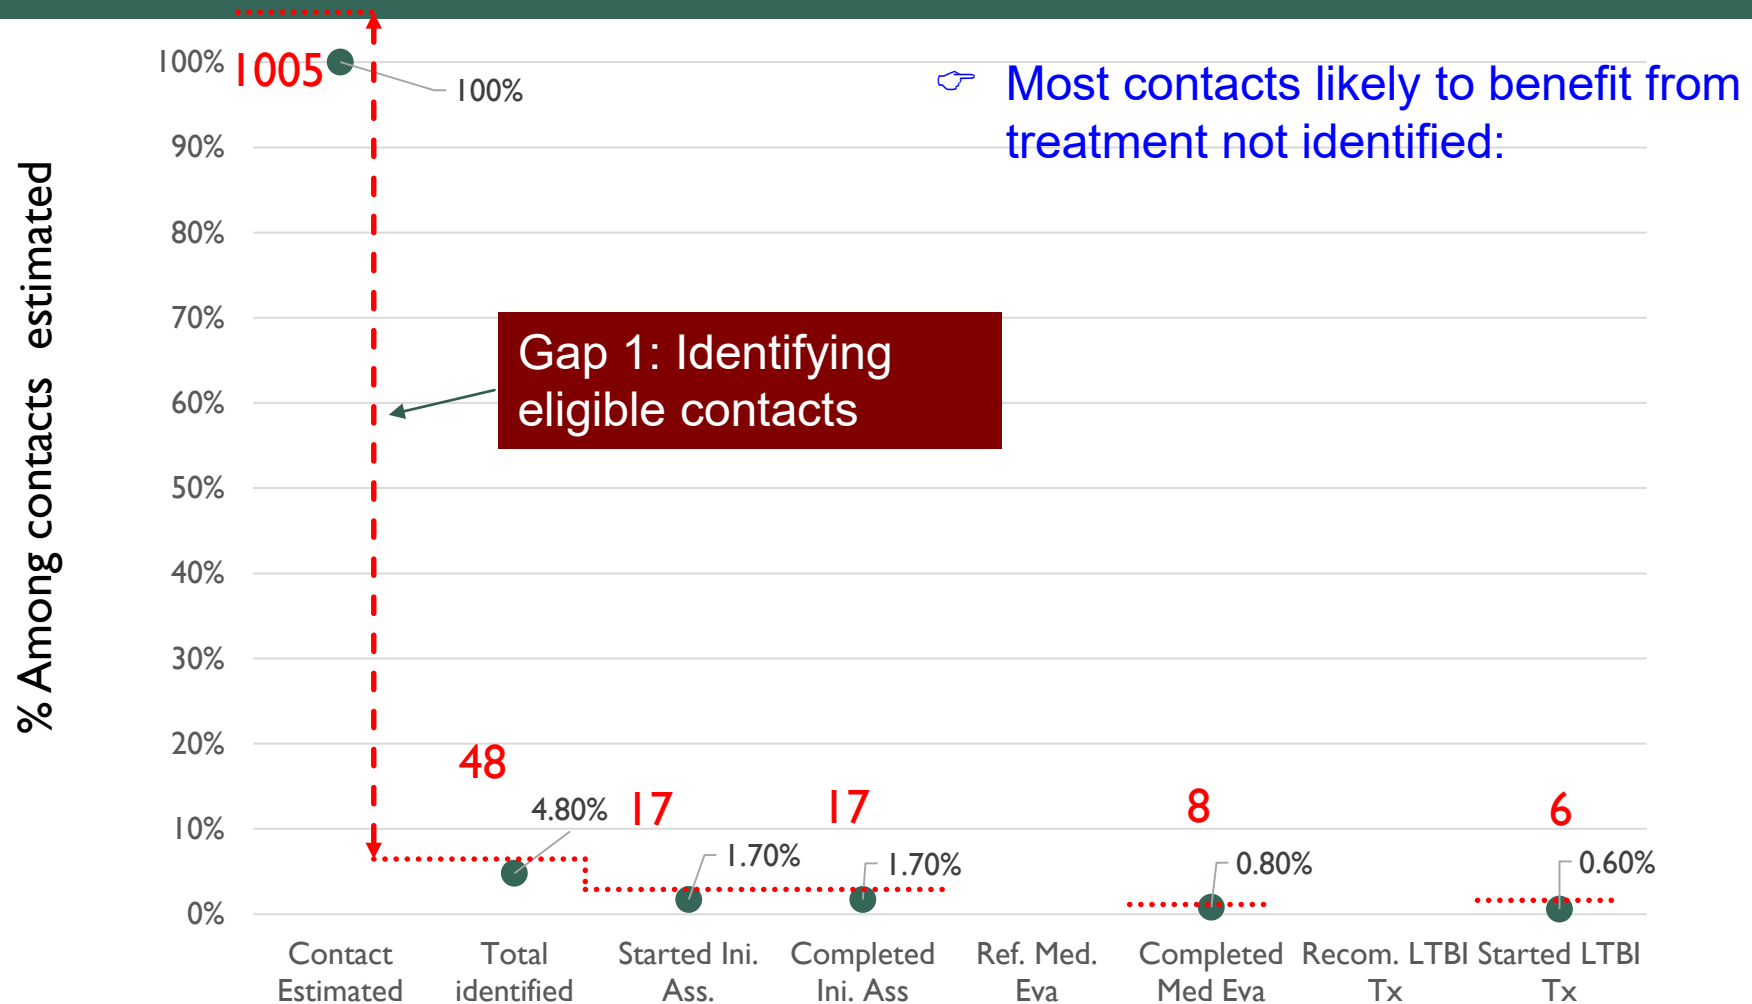

Agreement of reviewers reports with nurse on-site measurements estimated by coordinator

mTST for Quality control of TST Reading

- All reviewers reported induration
- Onsite measurement: 70 mm

EXAMPLE OF LTBI CASCADE ANALYSIS – VIETNAM *(courtesy Dr Buu)*

Setting: 5 intervention districts in 2 Provinces in Central Vietnam (Da Nang and Quang Nam)

ONE OF TWO HOUSEHOLD CONTACTS WITH A P.TB WILL DEVELOPT LTBI

Latent TB Infection

Latent TB infection means TB germs are in the body, but not enough to cause sickness or spread germs to others

TB Disease

If TB germs become active & multiply, latent TB infection can turn into TB disease

1 in 10

With out treatment, 1 in 10 people with latent TB infection will develop TB disease

PEOPLE WHO SHOULD BE TESTED FOR LATENT TB INFECTION

Contacts of people with TB disease

Particularly in children, aging and people who have immune deficiency ... that make it hard to fight TB disease

TREATING LATENT TB INFECTION PREVENTS TB DISEASE

Mantoux test

A Mantoux test can find TB Infection

Just taking continuously one drug (6 months for <15 years old, 9 months for ≥ 15 years old) will prevent 90% of active TB

Expense for LTBI treatment = 1
Expense for active TB treatment = 20, lost income due to stay at home for treatment not included

By using only one drug, latent TB treatment cost less than treating active disease

SCREENING & TREATMENT LATENT TB IS FREE OF CHARGE

Mantoux test, Chest X Ray, drug for LTBI treatment are free provided by the NTP of Vietnam in a health care project is implemented in Son Tra - Lien Chieu of Da Nang City and Tam Ky - Phu Ninh of Quang Nam Province

BRING HEALTH INSURANCE CARD TO ENJOY HEALTH CARE SERVICES
FOR MORE DETAILS PLEASE CONTACT WITH OUT-PATIENT DEPARTMENT OF THOSE DISTRICT HEALTH CENTERS

Hướng dẫn cách lấy mẫu đàm

Dành cho người tham gia sàng lọc

Chú ý

Đảm lấy từ phổi

KHÔNG phải là nước miếng, dịch tiết từ mũi

Không chạm miệng, tay vào thành cốc đàm

1 Chuẩn bị khác đàm

Làm sạch miệng

Mở nắp lọ đàm

2 Ho khác thật mạnh

Lần 1: Hit sâu rồi thở ra tối đa

Lần 2: Hit sâu rồi thở ra tối đa

Lần 3: Hit sâu ho, khác mạnh

3 Khạc đàm vào cốc

Đưa lọ đàm lên gần miệng rồi khạc đàm

Đẩy chất nắp đưa lại cho cán bộ y tế

What to do if missed a dose?

You should try not to miss any doses.

- If you forget to take a dose at the right time, take it as soon as you remember.
- If it is nearly time for your next dose, skip the missed dose and take the next dose as usual. Do not take a double dose to make up for the forgotten tablet.
- If you forget to take any doses let the doctor or pharmacist know the next time you are at the TB Clinic.

Contact Details if I need support or counselling:

Please contact a member of the team if you have anything related to your medicines.

TB Doctor:
Mobile:

TB nurse:
Mobile:

How can I remember to take my medicine?

You will be taking your TB medicine for a long time, so you should get into a routine. Here are some ways to remember to take your medicine regularly:

- Take your medicines at the same time every day and leave them in the same place (for example with your toothbrush).
- Mark off each day on a calendar as you take your medicine.
- Set an alarm to remind you to take your pills.
- Ask a family member or friend to remind you to take your medicine.
- Tell your TB doctor or nurse if you miss a dose of medicine.
- Keep all your clinic appointments. Your doctor or nurse needs to see how you are doing.

Project of
Latent Tuberculosis Infection Treatment

CLIENT INFORMATION LEAFLET

Bring Health Insurance Card to enjoy more health services

Gap 1: Identifying eligible contacts

Solution: Health educational materials for community regarding LTBI

Rationale: With appropriate knowledge, the community will cooperate well with the health service in practice for LTBI management

IMPROVEMENT IN CASCADE IN LTBI MANAGEMENT WITH ACT4 INTERVENTIONS - FROM 2/4/2018 – 30/9/2018 *(courtesy Dr Buu)*

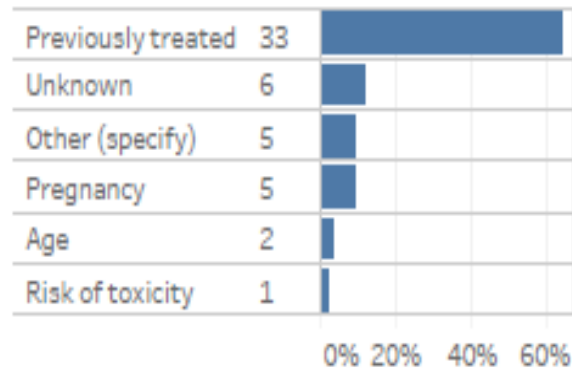

HHCs corresponding to 240 index TB patients

Example from Denver: Improving the latent TB cascade: clinic dashboard *(courtesy Dr B Burman)*

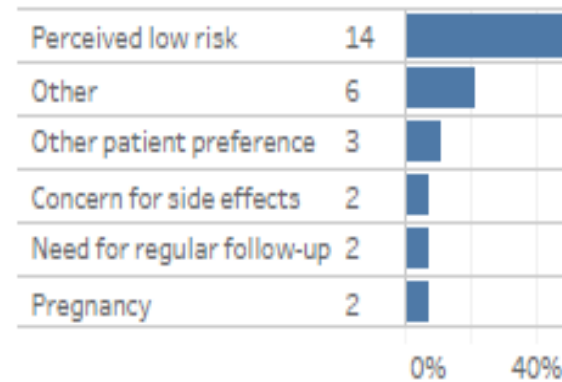

Digging deeper – reasons for drop-offs in the clinic latent TB cascade *(courtesy Dr B Burman)*

Reasons Treatment Not Offered

Need to improve data systems – previously treated patients should be classified as not needing treatment

Reasons Treatment Declined

Need to work on patient/community education about TB risk

Reasons Treatment Discontinued

Need to decrease losses prior to treatment completion

HUMAN RESOURCE REQUIREMENTS TO IMPROVE QUALITY OF LTBI CARE

HUMAN RESOURCE REQUIREMENTS TO IMPROVE QUALITY OF LTBI CARE

- ***Estimate the human resource requirements to improve the quality of LTBI care at study sites***
- To estimate the average HCW time spent on specific work tasks associated with each step in the LTBI Cascade of Care
- To calculate the change in personnel time spent on LTBI pre- and post-LTBI-strengthening activities

METHODS

- Used “Time and motion” (TAM) methods
- Follow HCW throughout a full, typical workday with continuous, direct observation
 - Write down every minute of work activity
 - Record time in pre-specified categories of activities
 - Break/pause time was removed from analysis – important that HCW know they aren’t being monitored for time spent on breaks

TIME SPENT ON PATIENT CARE – BY DIAGNOSIS

**BEFORE LTBI Program
Strengthening**

**AFTER LTBI Program
Strengthening**

HCW TIME SPENT ON PATIENT ENCOUNTERS AT EACH STEP OF THE LTBI CASCADE OF CARE

| LTBI Cascade of Care Steps** | Number of HCW performing each Step on TAM day | Total number of patient encounters with HCW at each Step on TAM day | Mean time spent on each Step (Std. Dev.) | Median time spent on each Step (IQR) |
|--------------------------------------|---|---|--|--------------------------------------|
| 1. Identification of contacts | 33 | 73 | 10.5 (10.4) | 6.0 (2-16) |
| High Income ¹ | 20 | 39 | 14.0 (11.2) | 12.0 (5-21) |
| LMIC ² | 13 | 34 | 6.6 (8.0) | 2.5 (2-7) |
| 2. Place TST³ | 22 | 64 | 8.1 (7.5) | 5.5 (2-12) |
| High Income | 13 | 32 | 13.1 (7.1) | 11.0 (9-15) |
| LMIC | 9 | 32 | 3.1 (3.4) | 2.0 (2-4) |
| 3. Read TST³ | 17 | 59 | 6.4 (6.1) | 4.0 (2-9) |
| High Income | 11 | 22 | 11.9 (6.9) | 10.5 (8-14) |
| LMIC | 6 | 37 | 3.2 (1.6) | 3.0 (2-4) |

HCW TIME* SPENT ON PATIENT ENCOUNTERS AT EACH STEP OF THE LTBI CASCADE OF CARE

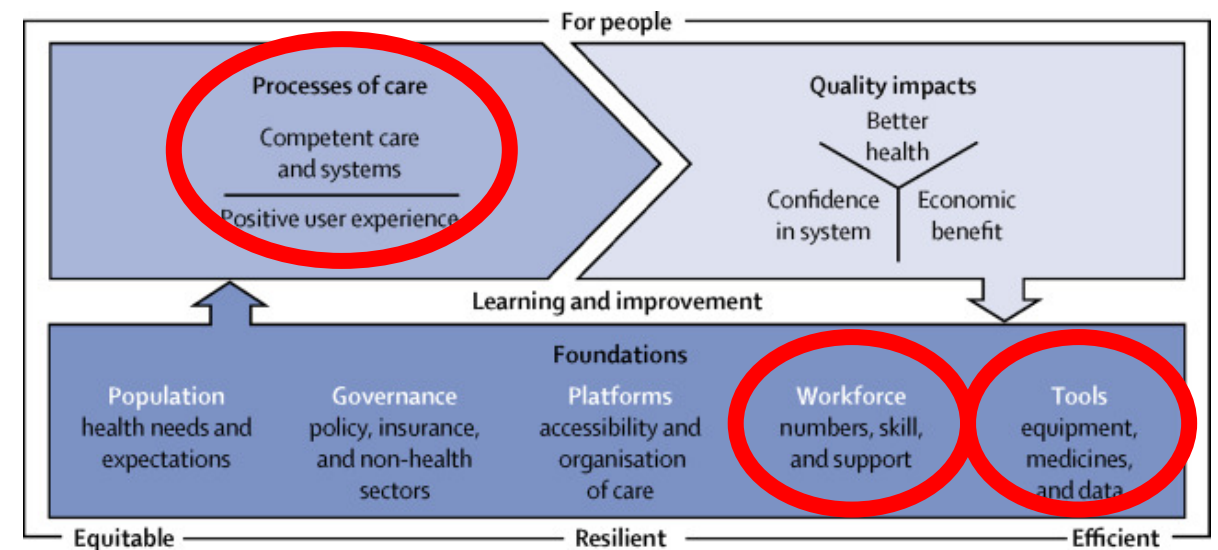

| LTBI Cascade of Care Steps** | Number of HCW performing each Step on TAM day | Total number of patient encounters with HCW at each Step on TAM day | Mean time spent on each Step (Std. Dev.) | Median time spent on each Step (IQR) |
|--|---|---|--|--------------------------------------|
| 4. Conduct Medical Evaluation | 43 | 116 | 12.1 (7.8) | 11.0 (6-16) |
| High Income | 33 | 90 | 13.0 (7.9) | 12.0 (7-17) |
| LMIC | 10 | 26 | 9.0 (6.6) | 7.5 (2-15) |
| 5. Recommend and discuss LTBI treatment | 42 | 143 | 10.8 (8.5) | 9.0 (4-13) |
| High Income | 34 | 92 | 13.9 (8.9) | 11.0 (8-18) |
| LMIC | 8 | 51 | 5.3 (3.5) | 4.0 (4-5) |
| 6. LTBI treatment follow-up | 56 | 276 | 9.3 (9.5) | 6.0 (2-12) |
| High Income | 44 | 191 | 12.0 (9.9) | 9.0 (5-16) |
| LMIC | 12 | 85 | 3.4 (4.4) | 2.0 (1-5) |

CONCLUSIONS

- **10% increase** in proportion of HCW time spent on **LTBI-related activities** as a result of LTBI programme strengthening
- BUT --- Time is taken away from active TB patient care activities (10% decrease in time on care for these type of patients)
 - HCW's in the same program had to shift work tasks as no staff were added
- TAMs provide a quantification of the **ADDITIONAL** HCW time required to expand LTBI services
 - To expand LTBI services – need added staffing to perform these work tasks

LANCET GLOBAL HEALTH COMMISSION FRAMEWORK

- ACT4 addressed multiple components of the Lancet Global Health Commission's Framework including:
 - Workforce requirements:
 - Evaluated through the use of TAM studies
 - Tools:
 - Site evaluation of the LTBI Cascade of Care
 - Questionnaires used to identify barriers to LTBI care
 - Trainings for HCW using a mobile health technology (mTST) for placing and reading TST

*Kruk, et al. Lancet Global Health, 2018

QUESTIONS?

- ▶ My special thanks to Hannah Alsdurf for this impressive body of work.
- ▶ Special **THANKS!** to the ACT4 teams involved in data collection:
- ▶ **Coordinating Center:** Dr. Dick Menzies, Dr. Olivia Oxlade, Dr. Federica Fregonese, Chantal Valiquette
- ▶ **Benin:** Dr. Menonli Adjobimey, Lydia Yaha
- ▶ **Canada:** Nancy Bedingfield, Catherine Paulsen, Kamila Romanowski, Leslie Chiang, Saeedeh Moayedini Nia
- ▶ **Ghana:** Dr. Joseph Obeng, Daniel Boafo
- ▶ **Indonesia:** Dr. Rovina Ruslami, Dr. Panji Hadisoemarto, Isni Aini
- ▶ **Vietnam:** Dr. Thu Anh Nguyen, Dr. Tran Buu

The ACT4 trial is supported by the Canadian Institutes of Health Research Grant #FND331745
